LIGHTING YOUR INSPIRATION

Fragranced Plug In Guide

Before beginning making your plugin, please familiarise yourself with the fragrance oil chemicals and hazards, and wear the appropriate PPE (ie apron, goggles, gas mask, gloves) as stated on the Safety Data Sheet.

Make Sure You Have:

- Fragrance Oil
- Small Jug/Pipette
- Diffuser Bottle
- Diffuser Base
- Bung
- Diffuser Stick
- Washer
- Bottle Lid
- Diffuser Plug

How to make a fragranced plug in:

- Choose your working area and cover any surfaces with a protective sheet (kitchen roll, newspaper etc).
- Before we begin, ensure that you have all the components separate to one another.
- Using a (small) measuring jug or pipette, pour out 10ml of fragrance oil.
- Carefully pour this into the plug in bottle.
- You will now need to repeat the process, but use 30ml of your base oil.
- Gently pour this into the plug in bottle.
- Your bottle should now be almost full, however ensure that the liquid is not in the neck of the bottle
- Slot the transparent bung in to the neck of the bottle.
- Now slide in the long white diffuser stick.
- Apply the white washer over the diffuser stick, so it rests on the transparent bung.
- The final step is adding the lid, ensure this is screwed on tightly, so the liquid does not leak.
- This is how your diffuser should be transported (along with the plug).
- To activate the product, simply remove the bottle lid and slot the diffuser stick into the plug.
- Your plug in is now ready to plug in, to select the level of strength you are wanting your plug in to diffuse, slide across the tab on the 1-5 meter (1 being the lowest and 5 being the highest).

Step by Step Guide

Step 1 – Separate all the components

- After applying gloves & protecting your work surface, it's time to separate all of your products.
- First we will be filling the bottle, so we need a small jug/pipette to hand, as well as your chosen fragrance oil & base oil.

Step 2 – Filling the bottle with fragrance

- Gently pour in 10ml of your chosen fragrance oil.

Step 3 – Filling the bottle with diffuser base

- Gently pour in 30ml of your diffuser base.

Step 4 – Add the bung

- The bung will easily slot into the neck of the bottle.

Step 5 – Slot in the diffuser stick

- The diffuser stick will easily slot into the hole in the bung.

Step 6 – Apply the washer

- Slot the white washer over the diffuser stick, so that it rests on top of the bung.

Step 7 – Apply the lid to the bottle

- For transportation purposes, this lid is crucial – this is how we recommend you ship to your customers.

Step 8 – Using your plug in

- To use your plug in (no lid needed at this stage), simply slot the diffuser stick into the hole in the plug & ensure it is secured.
- Use the temperature gauge on the front (1-5) to determine to strength. 1 being the lowest and 5 being the highest.

Step 9 – Add your CLP & safety info

- Don't forget to provide your CLP & safety info when selling on these items.
